

Option 3

Proceed with Project in Phases

Construction may proceed in phases as funds are available, for example, Phase I can be an extension of the waterline to Township Road 504.

The cost of each phase of the project will be shared with the landowners in the same manner as Option 1 or Option 2.

Note: in addition to the loan payment, each property owner will be required to pay installation costs and the monthly utility fee (see *What is the Project Cost?* poster).

Benefits:

- Cost of the project will be reduced
- Landowner share of the cost will be reduced

Challenges:

- Total project cost may be higher once all phases are complete
- Not all residents will have access to water supply at the same time
- If Clean Harbors' grant is discontinued, project may not be completed
